1.

(a) Fit a simple model using just education, catholic and infant.morality

```
result<- lm(Fertility~., data=data)
summary(result)
```

```
##
## Call:
## lm(formula = Fertility ~ ., data = data)

Based on the findings of this comparison, it would suggest that in this model these coefficients all have a significant test statistic as well as a significant P-value. and a highly significant p-value for the model as a whole

```

Null Hypothesis: At least one of the coefficients from the full model is 0

Alternate: none of these values are 1
